

NLP Experiment 1

Experiment-1.1: Read the employee dataset and display the average salary of each department using a bar chart.

```
import pandas as pd
import matplotlib.pyplot as plt
from google.colab import drive

drive.mount('/content/drive')
```

Mounted at /content/drive

```
df = pd.read_csv('/content/drive/MyDrive/Copy of employee_information_100.csv')

print(df.head())
```

	Employee_ID	Name	Department	Age	Gender	Salary	Experience_Years
0	E001	Diana1	HR	39	Male	58000	8
1	E002	Diana2	Operations	56	Male	105000	27
2	E003	Bob3	HR	27	Male	59000	32
3	E004	Neha4	HR	57	Male	113000	34
4	E005	Nisha5	IT	50	Female	30000	10

Start coding or [generate](#) with AI.

```
print(df.columns)
```

```
Index(['Employee_ID', 'Name', 'Department', 'Age', 'Gender', 'Salary',
      'Experience_Years'],
      dtype='object')
```

```
avg_salary = df.groupby('Department')['Salary'].mean()
```

```
print(avg_salary)
```

```
Department
Finance      82416.666667
HR           72095.238095
IT           73611.111111
Marketing    76100.000000
Operations   90875.000000
Sales        74769.230769
Name: Salary, dtype: float64
```

```
avg_salary.plot(kind='bar')
```

```
plt.title('Average Salary of Each Department')
plt.xlabel('Department')
plt.ylabel('Average Salary')
plt.xticks(rotation=45)
plt.show()
```

Experiment 1.2: Display the number of employees working in each department.

```
employee_count = df['Department'].value_counts()
print(employee_count)
```

```
Department
HR          21
Marketing   20
IT          18
Operations  16
Sales       13
Finance     12
Name: count, dtype: int64
```

```
employee_count.plot(kind='bar')

plt.title('Number of Employees in Each Department')
plt.xlabel('Department')
plt.ylabel('Number of Employees')
plt.xticks(rotation=45)
plt.show()
```

Experiment 1.3: Display the percentage of male and female employees using a pie chart

```
gender_count = df['Gender'].value_counts()

print(gender_count)

gender_count.plot(
    kind='pie',
    autopct='%1.1f%%',
    startangle=90
)

plt.title('Percentage of Male and Female Employees')
plt.ylabel('')
plt.show()
```

```
Gender
Male    64
Female  36
Name: count, dtype: int64
```

Percentage of Male and Female Employees

Experiment 1.4: Draw a histogram showing salary distribution.

```
plt.hist(df['Salary'], bins=10)

plt.title('Salary Distribution')
plt.xlabel('Salary')
plt.ylabel('Number of Employees')

plt.show()
```

Experiment 1.5: Draw a scatter plot showing the relationship between experience and salary.

```
plt.scatter(df['Experience_Years'], df['Salary'])

plt.title('Relationship Between Experience and Salary')
plt.xlabel('Experience (Years)')
plt.ylabel('Salary')

plt.show()
```

Experiment 1.6: Display the top 10 employees with the highest salary.

```
top_10 = df.sort_values('Salary', ascending=False).head(10)

print(top_10)
```

	Employee_ID	Name	Department	Age	Gender	Salary	Experience_Years
87	E088	Diana88	Marketing	36	Male	119000	33
85	E086	Omar86	Marketing	58	Male	119000	24
22	E023	Rahul23	Finance	57	Male	117000	7
14	E015	Ishan15	Operations	57	Male	117000	20
58	E059	Neha59	IT	43	Male	117000	16
48	E049	Charlie49	IT	26	Male	116000	15
64	E065	Bob65	Finance	35	Male	115000	6
55	E056	Sneha56	Operations	41	Male	115000	35
31	E032	George32	Operations	41	Female	115000	23
37	E038	Nisha38	IT	28	Male	114000	27

Experiment 1.7: Find the highest salary in every department.

```
highest_salary = df.groupby('Department')['Salary'].max()

print(highest_salary)
```

```
Department
Finance      117000
HR            113000
IT            117000
Marketing     119000
Operations    117000
Sales         114000
Name: Salary, dtype: int64
```

Experiment 1.8: Display employees whose salary is greater than the overall average salary.

```
average_salary = df['Salary'].mean()

employees = df[df['Salary'] > average_salary]

print(employees)
```

	Employee_ID	Name	Department	Age	Gender	Salary	Experience_Years

Experiment 1.9: Calculate the average years of experience in each department.

```
avg_experience = df.groupby('Department')['Experience_Years'].mean()
```

```
print(avg_experience)
```

```
Department
Finance      11.166667
HR            19.809524
IT            18.388889
Marketing    21.900000
Operations   16.875000
Sales        23.846154
Name: Experience_Years, dtype: float64
```

Experiment 1.10: Display the distribution of employee ages using a histogram.

```
plt.hist(df['Age'], bins=10)
```

```
plt.title('Distribution of Employee Ages')
```

```
plt.xlabel('Age')
```

```
plt.ylabel('Number of Employees')
```
